Parcel deliveries made easy, safe and fast

Mailrooms in most large organisations are handling a growing volume of deliveries and pickups. As a result, traditional manual logging and tracking processes are struggling to keep up and are becoming increasingly unacceptable in terms of time requirements, workflow and complexity.

Putting life, tasks and processes on hold waiting for parcels to be delivered is an outdated concept and now Pitney Bowes has the solution. Intelligent locker systems provide a reliable, secure and user friendly way to collect parcels whilst simultaneously improving tracking accuracy and reducing compliance issues.

Electronic locker deliveries are the future and Parcel Smart Lockers, powered by Mexin S.r.l., is leading the way.

- **Flexibility** 24/7/365 access
- **Reliability** Increased first time delivery rate
- **Security** Lockers are manufactured from the highest quality steel and specifically designed to prevent unauthorised intrusion.
- **Traceable** Secure collections are recorded to identify who has collected the parcel and when.
- **Clear Auditing** Every locker transaction is recorded enabling extensive auditing and reporting.
- **Fully customisable** Locker configurations can be customised to individual customer requirements and can fit anything from a letter to a set of golf clubs. Additional locker columns can be added as-required.
- **Notification** Parcel recipients receive a text or email notification when an item addressed to them is placed into a locker.
- **Promotion** Lockers can be branded and the touchscreen interface can be used for apps, information and advertising.

- **Postal Services** Allow customers to collect their items when convenient.
- **Retail** Make internet shopping easier by allowing your customers to collect their internet orders when it's convenient for them.
- **Business** For companies who handle a high volume of deliveries or where compliance and sensitivity is crucial eg. Medical, Financial, Pharma, Legal.
- **Universities** Replaces traditional locker systems on University campuses saving space and adding functionality.
- **Airports** Providing a left luggage service.
- **Government** Where compliance and sensitivity of information is crucial.
- **Hospitals** Ideal for medical deliveries.
- **Corporations** Enable hot-desking that is both secure and practical.
